

HELPING YOU MANAGE SECURITY POSTURE AND RISK FOR

DISCOVER

Empowering you to make informed decisions by providing a comprehensive and complete view of potential misconfigurations and data exposures for Salesforce

PROTECT

Providing you flexible and proactive enforcement policies and workflows for securing Salesforce

MONITOR

Helping you prevent posture and data access issues via consolidated monitoring and detection alerts and events for Salesforce

Salesforce is an incredibly powerful system, and with great power comes great responsibility! Protecting Salesforce requires Security, Compliance, and IT teams have the proper awareness, tooling, and automation to manage security posture, risk, and data access across all of their Salesforce environments.

Tired of relying on manual and costly analysis of your Salesforce environment that does not properly capture how much change occurs day to day? Looking to make sure the configuration and security posture of your Salesforce environment aligns with your goals and regulatory standards?

Our industry-leading SaaS security experts have deep knowledge and expertise managing and protecting Salesforce. With AppOmni for Salesforce, we now work for you.

UNDERSTAND WHO HAS ACCESS TO WHAT AND WHY

Salesforce's additive permissions and access system is able to support any sort of business logic, which leads to complexity. As your Salesforce environments live and grow, access control can become a tangled web.

Salesforce admins and Security teams alike need to be able to understand who has access to what, and why, with confidence!

DISCOVER INCORRECT CONFIGURATIONS AND PERMISSIONS

Built on the world's most powerful SaaS Security Posture Management platform, AppOmni for Salesforce delivers unparalleled visibility in minutes instead of months.

AppOmni provides visibility across 225+ Salesforce configuration settings and 350+ system permissions. Through these modeling capabilities, you can investigate the effective access a Salesforce user has and why that access exists. Immediately understanding what Profile, Permission Set, or System Setting – or combinations of them – is granting access reduces time to remediation (MTTR) and enables you to make changes with confidence.

EASILY CRAFT SECURITY GUARDRAILS

It's not just "too much" access that you need to watch out for. Being overly restrictive with access control can also be problematic. For example, one of your changes suddenly removes read abilities rendering a team unable to do their jobs.

These configuration changes can be just as impactful to a business as a data incident. With all the complexity of Salesforce, finding "just right" can be very time consuming and challenging.

LET US DO THE HEAVY LIFTING

AppOmni monitors 225+ Salesforce configuration settings and 350+ system permissions to make sure the configuration of your Salesforce environments never deviate from what you expect.

The powerful AppOmni modeling engine allows you to write rules about permissions and access without having to understand or review each Profile or Permission Set yourself. Let us do the hard work to make sure the configuration of your Salesforce environments never deviate from what you expect.

	AppOmni for Salesforce	Salesforce / Shield	Other Solutions
User Login History			
User Verification History	 <small>Requires Salesforce Shield</small>	 <small>Requires Salesforce Shield</small>	 <small>Requires Salesforce Shield</small>
Configuration Actions		6 months, unstructured	
User 2FA configuration changes			
OAuth Token Grants			
Normalized Record History

INVESTIGATE ACCESS DRIFT BETWEEN ROLES AND OVER TIME

Salesforce environments are living systems. As your business grows, so does the complexity and amount of data in your Salesforce environment. You require continuous monitoring and assurances across this environment to ensure they are secured and in compliance.

A 360° MONITORING VIEW

AppOmni allows you to travel back in time to any point since AppOmni has been installed and see how data access has changed. This capability can also be used to compare differences in access between two users to understand why one person has access and another doesn't.

Just like all other parts of the AppOmni platform, comparison views show you each and every reason access exists helping you fix problems faster.

APPOMNI FOR SALESFORCE GIVES YOU A 360° VIEW

By comprehensively evaluating and modeling the security posture of a Salesforce instance instead of simply watching event logs, AppOmni is able to provide immediate, relevant, and actionable insights.

- ✓ 225+ security-relevant settings for posture and configuration monitoring
- ✓ 350+ Permissions monitored for assignment to all RBAC elements
- ✓ 350+ Permissions monitored for *Effective* assignment to Users
- ✓ Profile configuration and data access entitlements
- ✓ Permission Set configuration and data access entitlements
- ✓ User configuration data
- ✓ External user access
- ✓ 1,325+ types of Setup Audit Trail data, normalized and translated
- ✓ Salesforce Communities and Sites configuration
- ✓ Connected Application installation
- ✓ All user OAuth token grants and usages
- ✓ Object and record access configurations
- ✓ Apex code access and configuration
- ✓ Custom Apex REST endpoint exposure
- ✓ Automatic risk analysis
- ✓ RBAC configuration exploration and reporting
- ✓ Continuous security posture monitoring
- ✓ Continuous data access monitoring
- ✓ Expert-built default policies and metrics
- ✓ Integration with external SIEMs
- ✓ Integration with work tracking systems
- ✓ Instant SOC2, NIST CSF, SOX, ISO reports
- ✓ Monitor permission changes, ensuring you detect privilege escalations
- ✓ Detect new OAuth Token grants and usages across instances

About AppOmni AppOmni is the leading software as a service (SaaS) data security and management platform for the enterprise. AppOmni provides unprecedented data access visibility, management, and security of SaaS solutions, enabling organizations to secure mission-critical and sensitive data. AppOmni's patent-pending technology comprehensively scans APIs, security controls, and configuration settings to evaluate the current state of SaaS deployments and compare against best practices and business intent. With AppOmni, organizations can establish rules for data access, data sharing, and third party applications that will be continuously and automatically validated. The company's leadership team brings expertise and innovation from leading SaaS providers, high tech companies, and cybersecurity vendors.
